FCC ID: 2ABFG-YRIZW2USPB1

According to KDB 447498 D01 General RF Exposure Guidance

At 100 Mb to 6 Gb and for test separation distances \leq 50 mm, the SAR test exclusion threshold is determined according to the following

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] $x [\sqrt{f(Glz)}] \le 3.0$

1. SAR test exclusion threshold

Frequency: 916 Mb (min. separation distances = 0 mm)

Calculation value: 1 (nW) / 5 (nm) x $\sqrt{0.916}$ = 0.191 So, Calculation value \leq 3.0

Remark:

-Max. Radiated field strength 91.94 (dBµV): Max. E.I.R.P. of EUT (-3.29 dBm)

-Max. E.I.R.P. 0.469 (mW) is less than 1 (mW), so 1 (mW) was calculated.

-When the minimum test separation distance is $< 5\,$ mm, a distance of $5\,$ mm is applied to determine SAR test exclusion.

2. Conclusion: No SAR is required.
